

HotDocs Cloud Services

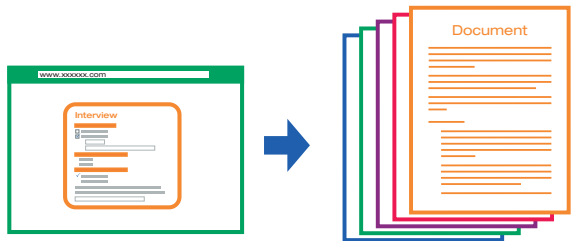

A Hosted Document Automation Platform
On Demand/Cost Effective/Transformational

HotDocs Cloud Services is a software platform designed for organisations of any size that would like the following:

- HotDocs technology integrated with existing web applications
- Browser-based document automation
- Hosted (subscription-based) solutions

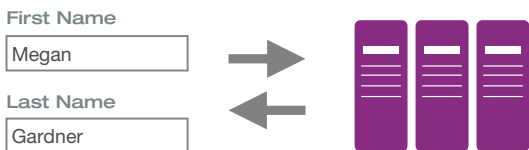

HotDocs Cloud Services runs on Microsoft's Windows Azure cloud, ensuring scalable and cost effective document automation with cutting-edge data security and industry leading reliability.

Using Cloud Service’s APIs, integrate and embed your dynamic, intelligent HotDocs interactive forms into your website or business application. Using web services, embed the interactive forms within (or without) frames on host pages.

Provide a custom document generation user experience within your own environments, including web pages and web applications.

Provide system users with the option to manually enter data into HotDocs interactive forms, import data from external databases, or use a combination of both options. This will speed up the document production process, create higher quality documents, and reduce costs.

Securely store sensitive data on your servers. Information gathered from your HotDocs forms that is used to assemble documents is never stored in HotDocs Cloud Services. It is only used to create documents since it is stored on your servers.

Benefit from the industry’s leading, browser-based, document automation technology on a subscription basis without the upfront cost of buying software and the ongoing expense of maintaining it.
