

HotDocs Server

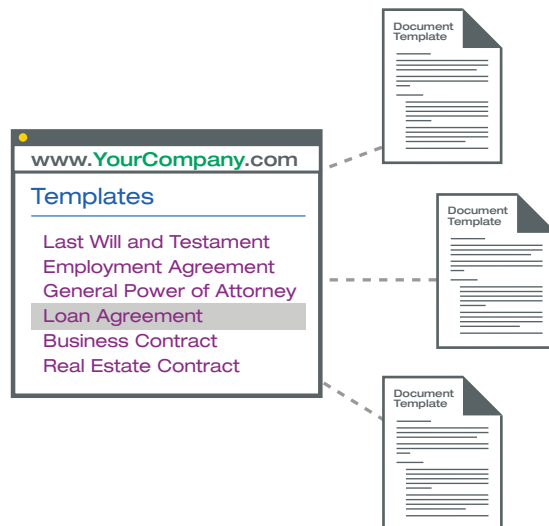

Deploy intelligent HotDocs templates throughout your organisation

HotDocs Server is designed for organisations that want the flexibility of web-based document assembly, but prefer to host the software on-premise. *HotDocs Server* enables you to run HotDocs templates within your own web pages and web applications, such as case management systems or BPM-defined workflows. With its power and scalability, *HotDocs Server* can handle the document automation requirements of any organisation.

Web-based Document Assembly

HotDocs Server enables web-based document assembly, with access to HotDocs templates via any web browser. HotDocs templates increase accuracy, minimise risk and save time during the document creation process.

Web Applications

HotDocs Server is deployed in conjunction with a web application, which serves as an interface for managing and accessing intelligent HotDocs templates. HotDocs Server is conveniently bundled with several off-the-shelf web applications that can be used as is or customised to fit an organisation’s specific needs. They can also be integrated with other commercial web applications, such as BPM workflows, case management systems or document management systems.

Who Uses HotDocs Server?

Many of the world’s largest organisations depend on HotDocs Server for enterprise-wide document assembly, including global banks, insurance providers, law firms, corporations and government agencies. HotDocs Server is built with the power and flexibility to function as foundation-layer technology in any enterprise, no matter how large and dynamic.
